

iPad and Data Plans

Do I need a data plan with an iPad if I want to write realtime feed to it?

All iPads models come with built-in Wi-Fi. That means every iPad can join networks (whether at a deposition for realtime or at Starbucks to surf the web). If you want to access the Internet in more places, choose a model that supports mobile data and sign up for service from your carrier.

Believe it or not, having a data plan has nothing whatsoever to do with your realtime feed! The quick-and-easy answer: No, you do not need internet access to use iCVN for realtime purposes.

When using your iPad for realtime purposes, your CAT computer and your iPad must be on the same LAN (Local Area Network) to properly work. Yep, it's just that simple! It's as easy as jumping onto your local Starbucks' Wi-Fi!

So the choice is all yours! Black or white? 16GB, 32GB, 64GB, or 128GB? Wi-Fi or Wi-Fi+Cellular?
